

Crew Management Database System

Overview

"CrewsAlong" - is a totally customizable - Microsoft Windows based - Crew Management Database System ideally suited to organizations whose prime activity is sourcing of competent personnel and rotation of the same for employment on board merchant navy ocean-going ships.

Industry demands

Selection and scheduling of qualified personnel has always been a very important aspect of ship management. With the integration of STCW95, ISM Quality Systems and other statutory requirements, it has become vital for crew managers to have all records documented and easily retrievable since the right personnel have to be sent to the appropriate vessels, more often than not, in short periods of time.

CrewsAlong delivers

CrewsAlong has been developed over several years by interacting with reputed crew manning agents and shipowners. Being highly modular, it can be "assembled" to suit the specific requirements of individual companies. Thus, it can be easily adapted for both a small crewing agency or a large multi-national shipowner. The benefits to be accrued are -

being more productive by

- installing the software in a very short period of time
- converting your existing data (if required)
- adapting faster to the extremely simple user interface
- enjoying round-the-clock support
- narrowing down to the most suitable candidates through extremely complex search criteria
- monitoring crew availability and plan rotation movements

getting a customized product by

- interacting with us and thus help us customize our product to your specific requirements
- adding client specific reports and modules
- porting all reports in WYSIWYG form to either MS WORD, MS EXCEL, HTML, RTF, E-Mail, etc.

securing data access by

- limiting the scope of data access and program access to the users based on roles assigned

growing gradually by

- using CrewsAlong's open architecture to seamlessly integrate custom specific modules into the existing software
- taking advantage of the above and select and pay for only the modules you choose to work with

Mission Statement

Silvodel is committed to simplifying and streamlining your IT requirements whether it is software development, networking, website or content development, Silvodel aims to surpass expectations and have you cruising along the sea of success.

Quality Policy
